

# V1200

## MORE SUCTION AND ERGONOMICS

The **V1200** is the vacuum cleaner for the fast and efficient harvesting of chestnuts, hazelnuts, walnuts, almonds and acorns. The machine is capable of separating the product from leaves or other aspirated residues that are expelled with the outgoing air. The tank can be emptied by holding the machine on the shoulder simply by activating the corresponding lever. To speed up harvesting operations, we recommend storing the product before vacuuming it with the BL1200 blower or the air outlet tube of the vacuum cleaner.

The fruits of the Earth in good hands. Since 1967.
